

Frozen Tissue Section Slide Certificate of Analysis

Product Name: Frozen Tissue Section Slide

Catalog No.: T1XXXXXX

Shipping Condition: Dry ice

Storage Condition: -70°C

Shelf Life: Half a year from the date of receipt under proper storage condition

Description

The tissue was frozen in liquid nitrogen immediately after excision. The tissue sections are 5-10 µm in thickness, mounted on positively charged glass slides, and fixed by cold acetone. The tissue section slides can be used for both immunohistochemistry and *in situ* hybridization. One of the tissue section slides from each lot was stained with H & E to ensure the quality. It is an ideal product for rapid cellular localization of RNA and protein expression.
